- After powering up the machine , absolutely do not touch to sockets.
- Before using the machine , wait 3-5 minutes while the machine is powered.
- Grind the area to be welded and clean with alcohol
- Pay attention to welding time of resistance wires on the pipe that is to be welded. (welding time will be determined as the pipe producer informs.)
- When welding , according to the thickness of the wire should be maintained; 1-3 mm at 3rd level 46 volts: 20-25 minutes 2-4 mm at 5th level 50 volts: 25-35 minutes.
- As machine tests and proposed values are conducted in closed arae in factory, in open area these values will subject to change. User must be aware of it.
- Power extension cord should not be longer than 10 mt.
- Welding values should be entered to the machine manually.
